Accutech SL10 Wireless Submersible Level Field Unit

Accutech field unitseliminate costly hard wired installations by providing an easy-to-install and secure wireless link between field-based process instrumentation and control infrastructure. They are intended for use in extreme environments where typical wired communication is not feasible or economical. Field units are configured locally through a LCD/keypad or remotely with Accutech Manager, which also provides a user-friendly environment for wireless network diagnostics and management. A wide range of process types are supported with a maximum of 100 field units possible per base radio network.

SL10 Features:

- Submersible Hydrostatic continuous level sensor
- Specific-gravity correction and all common level units
- User-defined low-rate and high-rate conditions

The Accutech SL10 wireless submersible level field unit measures hydrostatic level in a vented tank or well. The product samples and reports pressure readings at specified intervals and allows for user-defined low-rate and high-rate conditions. The sensor is cable-mounted and submersed in the tank liquid, dropping in from the top of the tank, pool or well. Specific-gravity correction and all common level units of measure are supported.

All Accutech field units automatically report field data to a centralized Accutech base radio over distances of up to 5000ft (1524m). Each field unit is self contained, featuring an integrated 900MHz (license-free band), frequency hopping, spread-spectrum transceiver and antenna, and long-lasting battery for up to 10 years of maintenance-free operation. Accutech field units are housed within a compact and weather-proof NEMA 4 enclosure with options for a NEMA 4X or explosion-proof enclosure, remote sensor and remote antenna on select models. Field units are available in a wide range of certifications are and protected by an industryleading 3-Year warranty (parts and labor).

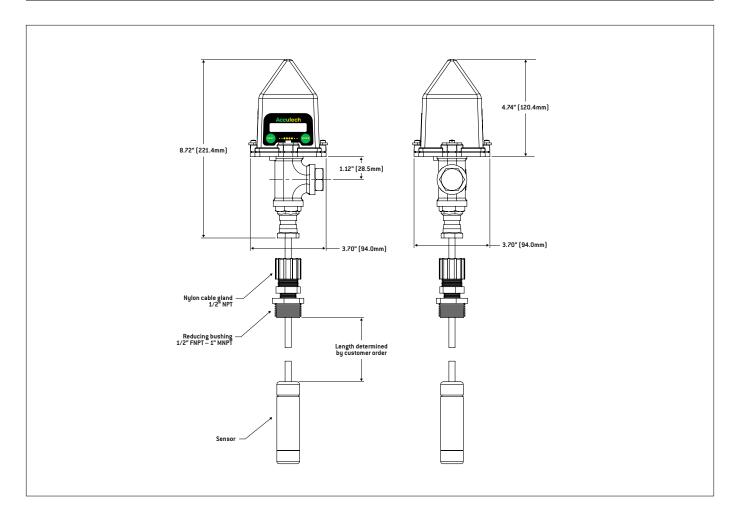

SL1O Specifications

Functional				
Sensor Type	Submersible Hydrostatic Level			
Location	Field Unit			
Frequency Range	902-928MHz			
Power	Integrated battery			
Features				
Accuracy	\pm 0.5 % of sensor URL over temperature range -4 to +140°F (-20 to +60°C)			
Stability	Combined zero and span stability: less than \pm 0.5% of sensor URL per year at 70°F (21°C)			
Sampling and Transmission Characteristic	 The level field unit samples pressure at regular intervals. The data may then be transmitted to the base radio for centralized monitoring and data acquisition. The user specifies how frequently the process is monitored and how often data is transmitte Level – user designates low rate and high rate conditions Sampling rate – user selectable from 1 to 60 seconds (low rate) and from 1 to 30 seconds (high rate) Transmission rate – user selectable from 1 second to 60 seconds (low and high rate) Accutech Manager can be used for Real-time monitoring of the process information. The user can set thresholds to represen "alarm" or abnormal conditions. 			
Submersible Sensor Cable	The sensor cable and vent tube is encased in an extremely rugged, polyurethane jacket that is rated for use in many harsh environments. The vent tube is protected by a hydrophobic filter.			
Remote Configuration Interface	Accutech Manager, Windows [™] -based GUI software, providing network-wide fault and performance-management features a field unit configuration capabilities			
Local Configuration Interface	 Integrated LCD with membrane-switch buttons Display provides pressure reading and error messages, if applicable Configure sampling and RF parameters locally using membrane-switch buttons 			
RF Characteristics	 902MHz - 928MHz band (FCC/IC) 915MHz - 928MHz band (Australia) 915MHz - 921MHz band (New Zealand) The RF module in each field unit is individually tested and calibrated over the full temperature range to ensure reliable wireless operation 			
Self-Diagnostics	 Low battery alarm – indicates the need to replace the battery (approximately one month warning). Contains extensive self-checking software and hardware that continuously monitors operation. Any sensor or device parameter that is out of spec is identified and reported. 			
General				
Operating Ambient Environment: Power:	 -4 to +140°F (-20 to +60°C) steady-state Process temperature -4 to +140°F (-20 to +60°C) steady-state Ambient temperature -4 to +140°F (-20 to +60°C) electronics (full display visibility) Humidity: 0 to 95 %, non-condensing Self-contained power One 'C' Cell Up to ten (10) year battery life (depends on sample rate and RF-update rate) 			
Physical Characteristics:				
Operating Shock and Vibration: Random Vibration Characteristics: Electromagnetic Compatibility	Certified per IEČ EN00068 2-6 (vibration) and 2-27 (shock) Certified to withstand 6 g's, 15 minutes per axis from 9 – 500Hz			
Safety Certifications:	 Operates within specification in fields from 80 to 1,000MHz with field strengths to 30V/m. Meets EN 50082-1 General Immunity Standard and EN 55011 compatibility emissions standard. Explosion Proof: Div 1: CSA - Class I, Div. 1, Groups A, B, C and D; Class II, Div. 1, Groups E, F and G; Class III, Div. 1 Div 2: CSA - Class I, Div. 2, Groups A, B, C and D; Class II, Div. 2, Groups F and G; Class III 			
	 Intrinsically Safe: CSA - Exia IIC; AEx ia IIC: Class I, Div. 1, Groups A, B, C & D; Class II, Div. 1, Groups E, F & G; Class III, Div. 1
